ABSTRACT OF THE DISCLOSURE

An image data processing device includes: a basic image
data acquisition device that acquires basic image data; a

5   simplified image data generation device that generates
simplified image data corresponding to the basic image data
which has been acquired, a size of the simplified image data
being smaller than that of the basic image data; a
transmission device that transmits at least the basic image

10   data to an external storage device; and an internal storage
device that stores the simplified image data without storing
the basic image data.
